Pokhara, Nepal

Dear Hiring Manager,

I am writing to express my interest in the Test Engineer position at Vista. I am currently an IBSc (Hons) Computing student with hands-on experience in Python, SQL, data analysis, database design, and performance reporting. I am drawn to this opportunity because it combines systematic problem-solving, software quality, automation, and collaborative work across front-end, back-end, and cloud-oriented products.

My experience has built habits that are highly relevant to testing: working carefully with complex information, validating results, investigating unexpected patterns, and communicating findings clearly. In my SEO Analyst internship at Fishtail Infosolutions, I monitored impressions, click-through rate, and average position using analytics tools. That work required close attention to performance changes, consistency in reporting, and a structured approach to identifying issues that could affect digital outcomes.

Through academic projects, I have also strengthened my technical and analytical foundation. For an NYC 311 analysis project, I processed more than 300,000 service requests using Python, Pandas, Seaborn, and SciPy, applying statistical tests and creating visual analyses to identify meaningful patterns. I designed an E-Classroom database in Oracle SQL with 13 interconnected tables and developed complex queries for tracking and performance analysis. These projects required disciplined data validation, logical debugging, testable thinking, and documentation—capabilities I would apply to analysing application behaviour and reporting defects effectively.

I understand that this intermediate-senior role seeks established experience in automated testing, C#, PowerShell, SpecFlow/Reqnroll, CI/CD, performance testing, and tools such as Selenium, JMeter, and Postman. While these are areas I am actively preparing to develop rather than claiming professional experience in, I am confident in my ability to learn technical frameworks quickly. My prior work with Python, SQL, Git, analytical workflows, and structured database systems gives me a practical foundation for building testing skills in automation, API validation, performance testing, and CI/CD practices.

Vista's focus on collaboration, clear communication, delivery, and continuous improvement strongly appeals to me. I would bring a thoughtful, detail-oriented approach; curiosity about complex systems; and a commitment to producing reliable, user-focused software. I am particularly motivated by the chance to contribute to products that support the global cinema industry.

I also recognise the posting's requirement for applicants to already have the right to live and work in New Zealand without employer sponsorship. I am currently based in Nepal, so I would require the appropriate work authorisation before I could take up employment in Auckland. If my eligibility aligns with Vista's hiring requirements, I would value the opportunity to discuss my application and technical potential further.

Thank you for your time and consideration. I look forward to the possibility of contributing to Vista's Digital product team.

Sincerely,

Tilasmı Subedi
